

EPIC: Educating Practices in the Community *Celebrating 10 Years of Improving Pediatric Primary Care in Connecticut*

10 Years of EPIC

Ten years ago, CHDI developed EPIC in partnership with Connecticut Chapters of the American Academy of Pediatrics and the American Academy of Family Physicians. The goal was to improve children's health by promoting pediatric practice change. EPIC began with a training on developmental screening. **Ten years later, EPIC offers 14 free one-hour training topics focused on promoting children's healthy development and improving the delivery of care.** Trainings are held over lunch or another convenient time in the comfort of the provider's office. EPIC has successfully helped more than 200 pediatric practices across Connecticut better meet the needs of children.

Feedback

“CHDI’s EPIC program has been invaluable to pediatric health providers in Connecticut. The trainings make it easy to implement important practice change recommendations and result in better care for children.” – Dr. Kenneth Spiegelman

After EPIC Trainings, more than 90 percent of practices said:

- *They have enough information to implement change*
- *The training was useful*
- *They will change their practice*

Children are Healthier

EPIC is working. Trainings have directly contributed to increased rates of screening for developmental issues and preventive oral health services over the past several years in Connecticut.
